

**Patient Positioning Systems, LLC** has recently acquired the **Stryker™ Glide** portfolio. **PPS** was formed to develop and sell medical equipment focused on the proper positioning of obese patients for improved safety and treatment outcomes. **PPS** recognizes the market need for high quality, cutting edge positioning products that benefit the bariatric patient population and reduce injuries to caregivers. We are committed to providing excellent customer service and products that are of the highest quality.

We look forward to a  
*smooth transition*  
as the Stryker Glide becomes the PPS Glide

*stryker*GLIDE  **PPSGlide**

Our products are made  
in the USA and we will  
continually strive to  
meet the needs  
of the end user.

## The PPS Glide is an innovative, air assisted safe patient handling solution.

Similar to an air hockey table, our technology reduces friction by circulating low pressure, high volume air through thousands of micro perforations. This creates a cushion of air upon which the patient can be effortlessly moved from one surface to another.

The efficiency of this technology significantly reduces the amount of exertion required for patient transfers, allowing for greater patient comfort, increased operational efficiency and a safer workplace for caregivers. Enhanced ergonomics, portability, a small storage footprint, ease of use, preservation of kin integrity and radiology compatibility are all added benefits.

The PPS Glide is the optimal safe patient handling product to meet your patient transfer needs in any patient care venue, especially the ED, OR, ICU, cath lab, and it has been shown to require nearly 90% less exertion than a standard drawsheet.
